

Welcome to Intraspace

In today's increasingly demanding commercial world, your networking, hosting and Internet solutions should be able to flex to your needs – supporting your business and allowing it to grow. This is something Intraspace is ideally positioned to give you.

Not only do we provide fast broadband speeds up to 40Mbps, we also offer a full range of quality networking, hosting and Internet technologies such as Private Wide Area Network, specialised server hosting, firewall management and VPN networks.

Secure. Efficient. UK-based.

Intraspace provides solutions that are cost efficient and most importantly, secure – all backed up by our knowledgeable team of UK-based technicians. Quite simply, Intraspace gives you the tools you need to conduct your business with confidence... whether your employees work on site, or on the go, you want to host your servers remotely; or you just need a reliable Internet and email provider.

It's one of the many reasons why we enjoy a long-standing reputation as a quality service provider – and have plenty of happy customers to show for it.

Get on with business

Speed. Security. Efficiency.

These are the things that matter most to our customers and we know it – that's why we use the latest technology and security measures to deliver the best results.

To make sure you get these things we'll work closely with you to tailor solutions to your needs and make sure we get them right from the word 'go'. This way you can get on with your day to day business and not worry about IT.

We also know how critical data is to your business. This is why we host all servers in high security, specially designed, multi-million pound data centres.

Or, if you want a more fixed price option that can still be tweaked to fit your needs, you can also choose from our off-the-shelf solutions: Platinum, Gold and Professional. Just give us a call to talk through your requirements.

Connected workplaces

We offer many ways for you to connect multiple offices and share resources securely and efficiently. These include creating your own Private Wide Area Network or a Virtual Private Network.

Private Wide Area Network (PWAN)

The top of the range, high-performance option for connecting your offices

PWAN is the secure and cost-effective way to share files and access data from sites across the country as easily and quickly as on a local network. To do this, you can either have your servers hosted by us in our data centres (in colocation), or have a server in each of your different sites. Whatever way you choose to go forward, you can expect great things from a PWAN:

- Fantastic bandwidth, meaning you can exchange data between sites at great speed.
- A very secure network – the PWAN doesn't run over the Internet but over a direct connection to Intraspace. This is why, to get the full benefit of PWAN, every one of your offices will need to be connected directly to us – meaning your Internet service will also be covered by the PWAN.
- Scalability and cost-effectiveness – a PWAN can be easily adapted to your growing business and makes great financial sense especially for larger groups of offices.

Get on with business

Virtual Private Network (VPN) & Firewall management

The affordable way to connect remote users and sites

Like the PWAN a VPN creates a private network, but does this over the Internet. It allows your remote users and offices to connect with you, just as if they were on site and is a very straightforward and cost effective option. But if your business grows significantly we would suggest upgrading to a PWAN that is more scalable than a VPN.

We also strongly recommend using a SonicWALL appliance and our Firewall Management service along with a VPN to enhance security and employee productivity. These are easy to use and allow you to block access to inappropriate websites.

Remote Users VPN

- Allows employees to connect to the office remotely
- Employees can work from home just as if they were in the office

Site to site VPN

- Also spans large areas, connecting your various offices
- Runs on top of your existing Internet connection
- Very affordable

Do more business, less IT

For most companies, the Internet means they can do more business, more efficiently. We know how important it is to you that you have an Internet and email provider you can rely on. You can rely on us for this and much, much more. We're a one-stop-shop, providing everything from web design, domain and web hosting, server and email hosting – not to mention broadband speeds up to 40Mbps.

Helping you make connections

Web design & development – from e-Commerce solutions to simple windows to cyberspace

With Intraspace you can have a full e-Commerce website built and fully tailored to your business' requirements – which we build on a MySQL database platform. We can also help you create vibrant communities on your website using forums built in phpBB, or give you the blogging tools to share your professional expertise, using WordPress.

Or, if you want a more fixed price option that can still be tweaked to fit your needs, you can also choose from our off-the-shelf solutions: Platinum, Gold and Professional. Just give us a call to talk through your requirements.

Domain & web hosting – a service to ease your workload

As well as hosting your website and domain name, we also ease your IT workload. Some ISPs promote self managed control panels – we don't. Why? Because this means less time for business, and more time spent on IT technical management. Instead, we take the load off your shoulders and give you full support.

Why Intraspace?

Quite simply, we deliver high performance connectivity for a demanding business audience, in a competitive commercial world.

With over 10 years experience, Intraspace has developed a reputation for being honest, reliable, fast and effective – and have a long list of satisfied customers to prove it.

Expertise. Quality. Cutting-edge technologies.

A powerful combination – one that means we can give you the tools you need to make the most of your business resources. With every company being so different, we'll work with you closely to understand your requirements – and then put forward a solution that makes the most of your budget and the latest technologies.

What's more, because we're a one-stop-shop for Internet technologies, you can be sure that you'll get the same friendly and knowledgeable technical support for all our services.

Get in touch

We're based in Hereford and help clients right across the country with our high performance technologies. If you would like to find out how we can help your business too, you can reach us by:
